

Eberechukwu Uchechukwu Gerald

Web & App Developer & UI/UX Designer

PROFILE

I design and build websites and web apps end to end, from the first wireframe in Figma to the code that ships. Since 2024 I've freelanced for founders and small teams who needed one person to take a rough idea through design and into working code. I care about clean interfaces, pages that load fast and still behave on a cheap phone, and code someone else can pick up months later.

EXPERIENCE

Freelance Web & App Developer & UI/UX Designer

Remote, 2024 to now

- Build marketing sites, dashboards and web apps from an empty folder, with proper markup, keyboard support that works, and a front end that still behaves on a cheap phone.
- Design in Figma from wireframes to finished screens, with type, spacing and colour chosen on purpose, and hand them over as files a developer can build from without guessing.
- Set up design systems: components, tokens and the rules around them, written down once so the tenth screen still looks like the first.
- Rescue sites that grew slow or messy: keep what's worth keeping and rebuild the rest properly.
- Work fully remote with written plans, a live preview link from day one, same day replies, and handover notes written for a human.

SELECTED WORK

FreshFind | Team leader, Aptech TechWiz 7, September 2026

geraldxtra.github.io/freshfind

A guide to farmers markets in Lagos: where each market is, when it opens and what's in season. I led a team of four and built the home page, the market data, the shared layout and the chat helper that answers common questions.

React, Vite, React Router, Geolocation

LedgerWatch | Web app useledgerwatch.co

Chases every outstanding invoice and keeps an eye on the market around the clock, so nothing slips while you run the business.

React.js, Web3.js, Node.js, MongoDB

SafeNote | Web app safenote.xyz

Send a note or a file that deletes itself after one read. It's encrypted in the browser before it leaves, the link opens once, and there's no account to create.

React, Node.js, Encryption

Gearzone Commerce Design | UI/UX design [Figma](#)

The full design pass for a tech and gadget store: user flows, wireframes, a component library and the finished screens.

Figma, Wireframing, Design System

Crunchyroll Prototype | UI/UX design [Figma prototype](#)

A redesign and clickable prototype: browsing the catalogue, starting an episode and picking up where you left off, mapped out screen by screen.

Figma, Prototyping

SKILLS

Frontend

HTML and CSS

JavaScript

React.js + Vite
