

Eberechukwu Uchechukwu Gerald

Web & App Developer

Lagos, Nigeria (WAT, UTC+1) | Email: geralddevbit@gmail.com | Phone and WhatsApp: +234 712 010 3256
Portfolio: geraldextra.github.io | GitHub: github.com/GeraldXtra

Target role: Web & App Developer on a team building React and Node.js products. Open to remote work or on-site in Lagos, full-time or contract.

SUMMARY

Web and app developer in Lagos. I build React front ends with Node.js and Express back ends, and I have built a Windows desktop app with Electron. I have freelanced since 2024, taking client sites from a Figma design to a live deployment. In September 2026 I led a team of four to build FreshFind for TechWiz 7, Aptech's world tech championship. I am studying for the Advanced Diploma in Software Engineering at Aptech.

SKILLS

Front end:	JavaScript (ES6+), TypeScript, React.js, React Router, Vite, HTML5, CSS3, responsive layouts, accessibility
Back end and data:	Node.js, Express, MongoDB, MySQL, SQL
Desktop apps:	Electron, Python, WebSockets, xterm.js, Three.js
Design:	Figma, wireframes, clickable prototypes, component libraries
Tools and hosting:	Git, GitHub, GitHub Pages, Vercel, Netlify, Render, Docker, AWS
Also written:	Go, Solidity, Java, C

EXPERIENCE

Freelance Web Developer , remote	2024 - Present
- Build websites and web apps for founders and small businesses, from gathering requirements to a live site on Vercel, Netlify or Render. - Design the screens in Figma first so clients approve the layout and flow before any code is written. - Build responsive React front ends and Node.js back ends, share a live preview link during the build, and hand over the code, accounts and written notes at the end.	

PROJECTS

FreshFind , team leader, class team project for TechWiz 7, Aptech Worldwide geraldextra.github.io/freshfind	Sep 2026
- Led Team Tech Hive (4 people) building a Lagos farmers' market finder in React, React Router and Vite. Split the work by page with one shared theme file and one data owner. - Wrote the market and produce JSON data every page reads, and built the home page search, bookmarks and a rule-based chat assistant. - Converted the photos to WebP and resized them (100 MB down to 4 MB). Every page scored 100 in Lighthouse for accessibility, best practices and SEO.	
Tessa , voice assistant for Windows github.com/GeraldXtra/tessa	Aug 2026 - Present
- Building a desktop assistant with a Python core and two Electron clients in React and TypeScript: a voice interface and a terminal that runs Command Prompt, PowerShell and Git Bash. - Designed a permission model where reversible actions run straight away and consequential ones wait for the user to approve them.	
LedgerWatch , receivables and market monitoring web app useledgerwatch.co	Jul 2026
- Built a tool that tracks what customers owe a small business and drafts payment reminders that a person approves before sending. React, Node.js, Express, MongoDB. - Added a market watch agent that uses a non-custodial testnet wallet through Web3.js.	
SafeNote , one-time encrypted notes React, Node.js	
Built a note and file sharing app that encrypts in the browser before sending and deletes the note after it is read once. No accounts.	
Also: storefront front ends (Digitaz, eTrade) in HTML, CSS and JavaScript, and Figma case studies (Gearzone, Crunchyroll redesign).	

EDUCATION

Advanced Diploma in Software Engineering (ADSE) , Aptech, Ajao Estate, Lagos	2026 - 2028, in progress
Self-taught web development, 2022 - 2024. Languages: English (fluent), Igbo (native).
